ANA ORTEGA P. Nutricionista, COFADE - Hospital Sótero del Río.

CARACTERÍSTICAS BIO-PSICO-SOCIALES DEL MENOR DESNUTRIDO

The bio-psychosocial characteristics of the adolescent patients in the Undernourished Familial Collection Programme (COFADE) have been analysed. Child malnutrition is primary in 78% of the cases and due to ill health in 22%. The most common cause for this is the parents' malnutrition (78%) and 27% respectively. 17% of the children are ill and 5% are pregnant while 21% are malnourished. The malnutrition and ill health have been verified in 42.4% of the patients. The malnutrition is 78% and 27% respectively. 17% of the children are ill and 5% are pregnant while 21% are malnourished.
